SIES (Nerul) College of Arts, Science and Commerce (Autonomous)

(Affiliated to University of Mumbai)
RE-ACCREDITED GRADE "A" BY NAAC (3rd CYCLE)
BOARD OF STUDIES
SYLLABUS FOR
M.Sc. Computer Science
(WITH EFFECT FROM THE ACADEMIC YEAR 2023-2024)

OBJECTIVES OF THE PROGRAMME:

- To be fundamentally strong at core subject of Computer Science.
- To apply programming and computational skills for industrial solutions.
- Broad understanding of latest technological trends.
- To identify opportunities for establishing an enterprise for immediate Employment.
- Able to understand and apply fundamental research concepts.

PROGRAMME OUTCOMES:

- An ability to apply the skills acquired in post-graduation to get better career prospects.
- An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computational systems.
- An ability to apply the knowledge for higher research in a specialized area of Computer Science.
- Ability to understand and apply the core concepts of Computer Science.
- Ability to provide socially acceptable technical solutions in various domains of specializations.

Applied Signal and Image Processing

COURSE CODE : M23CS1MJ01 **COURSE CREDIT: 04**

1 credit - 15 lectures

1 lecture is 60 minutes

Course Objectives:

- Understanding the terminologies of signal and digital image processing
- Learn about basic image processing techniques.
- Develop skills to design and implement algorithms for advanced image analysis.
- Apply image processing to design solutions to real-life problems

Course Objectives:

- Apply image processing algorithms in practical applications.
- Ability to apply various images, intensity transformations, and spatial filtering.
- Knowledge of Perform frequency domain operations on images.
- Ability to apply image segmentation and extract image features.

Unit	Syllabus	No. of lectures
1.	**Signals**: Periodic signals, Spectral decomposition, Signals, Reading and writing Waves, Spectrums, Wave objects, Signal objects **Harmonics**: Triangle Waves, Square Waves, Aliasing, Computing the Spectrum, **Noise**: Uncorrelated noise, Integrated spectrum, Brownian noise, Pink Noise, Gaussian noise; **Autocorrelation**: Correlation, Serial correlation, Autocorrelation, Autocorrelation of periodic signals, Correlation as a dot product **Case Study**	15
2.	**Introduction**: What is Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image types and files formats. **Intensity Transformations**- Log Transform, Power-law Transform, Contrast Stretching, Thresholding **Histogram Processing**- Histogram Equalization and Histogram Matching. Linear and Non-linear smoothing of Images, Sharpening of images. **Image Derivative**: Derivatives and gradients, Laplacian, the effect of noise on gradient computation **Case Study**	15
3.	**Edge Detection**: Sobel, Canny Prewitt, Robert edge detection techniques, LoG and DoG filters, Image Pyramids: Gaussian Pyramid, Laplacian Pyramid **Morphological Image Processing**: Erosion, Dilation, Opening and closing, Hit-or-Miss Transformation, Skeletonizing, Computing the convex hull, removing small objects, White and black top-hats, Extracting the boundary, Grayscale operations **Case Study**	15
4.	**Extracting Image Features and Descriptors**: Feature detector versus descriptors, Boundary Processing and feature descriptor, Principal Components, Harris Corner Detector, Blob detector, Histogram of Oriented Gradients, Scale-invariant feature transforms, Haar-like features **Image Segmentation**: Hough Transform for detecting lines and circles, Thresholding and Otsu's segmentation, Edge- based/region-based segmentation, Region growing, Region splitting and Merging, Watershed algorithm, Active Contours, morphological snakes, and GrabCut algorithms **Case Study**	15

4. Fundamentals of Digital Images Processing by A K Jain, Pearson, 2010

Applied Signal and Image Processing - Practical

COURSE CODE : M23CS1MJP01 **COURSE CREDIT: 02**

1 credit - 30 lectures

1 lecture is 60 minutes

Sr. No.	List of Practical
1	Write program to demonstrate the following aspects of image processing on suitable data 1. Upsampling and downsampling on Image 2. Fast Fourier Transform to compute DFT
2	Write program to demonstrate the following aspects of signal on sound/image data 1. Convolution operation 2. Template Matching
3	Write program to implement point/pixel intensity transformations such as 1. Log and Power-law transformations 2. Contrast adjustments 3. Histogram equalization 4. Thresholding, and halftoning operations
4	Write a program to apply various enhancements on images using image derivatives by implementing Gradient and Laplacian operations.
5	Write a program to implement linear and nonlinear noise smoothing on suitable image or sound signal.
6	Write a program to apply various image enhancement using image derivatives by implementing smoothing, sharpening, and unsharp masking filters for generating suitable images for specific application requirements.
7	Write a program to Apply edge detection techniques such as Sobel and Canny to extract meaningful information from the given image samples
8	Write the program to implement various morphological image processing techniques.
9	Write the program to extract image features by implementing methods like corner and blob detectors, HoG and Haar features
10	Write the program to apply segmentation for detecting lines, circles, and other shapes/objects. Also, implement edge-based and region-based segmentation.

Algorithm for Optimization

COURSE CODE : M23CS1MJ02 **COURSE CREDIT: 04**

1 credit - 15 lectures

1 lecture is 60 minutes

Course Objectives:

- You will be able to effectively implement optimization techniques to the existing algorithm to improve its performance.
- You will be able to work in the areas of Machine Learning and Data Sciences Algorithms
- You will be able to perform sampling using different algorithms.
- You will be able to deal with Uncertainty in optimization.

Course Outcomes:

- Ability to understand the Optimization Process
- Optimization with a focus on practical algorithms for the design of engineering systems.
- Exposure to multivariable calculus, linear algebra, and probability concepts.
- Learn a wide variety of optimization topics, introducing the underlying mathematical problem formulations and the algorithms for solving them

Unit	Syllabus	No. of lectures
01	**Introduction to Optimization Process** Basic Optimization Problem, Constraints, Critical Points, Conditions for Local Minima, Contour Plots. Unimodality, Fibonacci Search, Golden Section Search, Quadratic Fit Search. **Case Study**	**15**
02	**Order Methods** First-Order Methods, Gradient Descent, Conjugate Gradient, Adagrad, RMSProp, Adadelta, Adam, Hypergradient Descent. Second-Order Methods, Newton's Method, Secant Method, QuasiNewton Methods **Case Study**	**15**
03	**Sampling and Surrogate Models** Sampling Plans, Full Factorial, Random Sampling, Uniform Projection Plans, Stratified Sampling, Space-Filling Metrics. Surrogate Models, Fitting Surrogate Models, Linear Models, Basis Functions, Fitting Noisy Objective Functions, Model Selection, Probabilistic Surrogate Models, Gaussian Distribution, Gaussian Processes, Prediction. **Case Study**	**15**
04	**Optimization and Uncertainty** Optimization under Uncertainty, Uncertainty, Set-Based Uncertainty, Probabilistic Uncertainty. Uncertainty Propagation, Sampling Methods, Taylor Approximation, Polynomial Chaos, Bayesian Monte Carlo. Dynamic Programming, Ant Colony Optimization. Expression Optimization, Grammars, Genetic Programming, Grammatical Evolution, Probabilistic Grammars, Probabilistic Prototype Trees. **Case Study**	15

2. Decision Making Under Uncertainty: Theory and Application by Mykel J. Kochenderfer MIT Lincoln Laboratory Series 2015.

3. Introduction to Algorithms, By Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein 3Ed. (International Edition) (MIT Press) 2009

Algorithm for Optimization - Practical

COURSE CODE : M23CS1MJP02 **COURSE CREDIT: 02**

1 credit - 30 lectures

1 lecture is 60 minutes

Note:

- All the Practical's should be implemented using Julia Link: Julia:https://julialang.org/

Sr. No	List of practical
1	Implement Contour Plots.
2	Implement Fibonacci and Golden section search
3	Implement Quadratic Fit Search.
4	Implement Gradient descent.
5	Implement quasi-Newton methods to find the local maxima.
6	Implement the Adagrad method with application, RMSprop and Adadelta
7	Implement radial basis functions using surrogate modeling.
8	Apply Random Forest in surrogate Model.
9	Implement Gaussian Process and its application.
10	Path finding using Ant Colony Optimization with an application.

Advanced Database Techniques

COURSE CODE : M23CS1MJ03 COURSE CREDIT: 02

1 credit - 15 lectures

1 lecture is 60 minutes

Course Objectives:

- To provide students with theoretical knowledge and practical skills in advanced topics in database systems, big data and modern data-intensive systems.

Course Objectives:

- To form professional competencies related to design and implementation of non-relational databases, including object-oriented, parallel and Distributed.

Unit	Syllabus	No. of lectures
01	**Spatial and Temporal Databases:** Temporal Databases: Overview of Temporal Databases- TSQL2, Spatial Databases- Spatial Data Types- Spatial Relationships- Spatial Data Structures- Spatial Access Methods- Spatial DB Implementation **Distributed Databases**: Concepts, Data fragmentation, Replication and allocation techniques for distributed database design, Query processing, Concurrency control and recovery in distributed databases, Architecture and Design: Centralised versus non centralized Databases, Homogeneous and Heterogeneous DDBMS, Functions and Architecture, Distributed database design, query processing in DDBMS. **Basics Introduction to NoSQL**: Characteristics of NoSQL, NoSQL Storage types, Advantages and Drawbacks, NoSQL Products Interfacing and interacting with NoSQL: Storing Data In and Accessing Data from MongoDB, Redis, HBase and Apache Cassandra, Language Bindings for NoSQL Data Stores Understanding the storage architecture: Working with Column Oriented Databases, HBase Distributed Storage Architecture, Document Store Internals. **Case Study**	**15**

References:

1. Database Management Systems by Raghu Ramakrishnan and Johannes Gehrke, McGraw Hill, 3rd Edition, 2014

3. Getting Started with NoSQL, Gaurav Vaish, Packt Publishing Ltd, 2013

Additional References:

1. Advanced Database Management System by byRini Chakrabarti and Shilbhadra Dasgupta, Dreamtech Press, 2017

2. SQL & NoSQL Databases, Andreas Meier · Michael Kaufmann, Springer Vieweg, 2019

3. Parallel and Distributed Systems by Arun Kulkarni, Nupur Prasad Giri, Wiley, Second edition, 2017

4. Practical Hadoop Migration: How to Integrate Your RDBMS with the Hadoop Ecosystem and Re-Architect Relational Applications to NoSQL By Bhushan Lakhe, Apress; 1st edition, 2016

Advanced Database Techniques-Practical

COURSE CODE : M23CS1MJP03 COURSE CREDIT: 01

1 credit - 30 lectures

1 lecture is 60 minutes

Note:

- All the Practical's should be implemented using Julia Link: Julia:https://julialang.org/

Sr. No	List of Practical
1	Create different types that include attributes and methods. Define tables for these types by adding a sufficient number of tuples. Demonstrate insert, update and delete operations on these tables. Execute queries on them.
2	Create an XML database and demonstrate insert, update and delete operations on these tables. Issue queries on it.
3	Demonstrate distributed databases environment by dividing given global conceCreate a table that stores spatial data and issue queries on it.
4	Create a table that stores spatial data and issues queries on it.
5	Create a temporal database and issue queries on it.
6	Demonstrate the Accessing and Storing and performing CRUD operations in 21 1. MongoDB 2. Redis
7	Demonstrate the Accessing and Storing and performing CRUD operations in 1. HBase 2. Apache Cassandra
8	Demonstrating MapReduce in MongoDB to count the number of female (F) and male (M) respondents in the database.
9	Demonstrate the indexing and ordering operations in 1. MongoDB 2. CouchDB 3. Apache Cassandra
10	Demonstrate the use of data management and operations using NoSQL in the Cloud.

Software Defined Networking

COURSE CODE : M23CS1E01 **COURSE CREDIT: 03**

1 credit - 15 lectures

1 lecture is 60 minutes

Course Objectives:

- To make the students capable of understanding computer network basics.
- To Obtain the knowledge of Software defined networks with understanding of data plane, control plane and application plane.
- To apply network virtualization for industry standard solutions.

Course Objectives:

- To improve skills in implementing network virtualization and Software Defined Network (SDN).
- Learners will be able to explore OpenFlow specifications to build Software defined networks.
- Learners will be able to analyze and implement theories and practical related to Network management and Virtualization

Unit	Syllabus	No. of lectures
01	**Introduction to Software Defined Networking** Understanding the layered architecture of OSI/RM and TCP-IP Model Study of various network Routing protocols, Introduction to Transport layer and Application layer protocols. Elements of Modern Networking, Requirements and Technology, SDN: Background and Motivation, SDN Data Plane and OpenFlow, SDN Control Plane, SDN Application Plane **Case Study**	**15**
02	**Network Functions Virtualization** Concepts and Architecture, NFV Functionality, Network Virtualization Quality of Service, MODERN NETWORK ARCHITECTURE: CLOUDS AND FOG, Cloud Computing, The Internet of Things: Components **Case Study**	**15**
03	**Design and implementation of Network** Understand and implement Layer 2/3 switching techniques (VLAN/TRUNKING/Managing Spanning Tree), Implementation of OSPF V2 and V3, Implementation BGP, Implementation Multicast Routing, Implementation of MPLS, Implementation of Traffic Filtering by using Standard and Extended Access Control List, Implementation of Routing redistribution, Implementation of Policy Based Routing/Load Balancing /QOS/Natting /VRF **Case Study**	**15**

1. Behrouz A Forouzan ―TCPIP Protocol Suite‖ Fourth Edition 2010
2. William Stallings, ―Foundations of Modern Networking‖, Pearson Ltd.,2016.
3. Software Defined Networks: A Comprehensive Approach by Paul Goransson and Chuck Black, Morgan Kaufmann Publications, 2014
4. SDN - Software Defined Networks by Thomas D. Nadeau & Ken Gray, O'Reilly, 2013
5. Network Programmability and Automation-Jason Edelman, Matt Oswalt First Edition 2018.

Software Defined Networking - Practical

COURSE CODE : M23CS1EP01 COURSE CREDIT: 01

1 credit - 30 lectures

1 lecture is 60 minutes

Note:

- **All the Practical's should be implemented using GNS3/EVENG/CISCO VIRL**
- **Link: GNS3 :https://www.gns3.com/software/download**
- **EVE-NG: https://www.eve-ng.net/index.php/download/CISCO**
- **VIRL:https://learningnetwork.cisco.com/s/question/0D53i00000Kswpr/virl-15-download**

Sr. No	Syllabus
1	1. Implement SPAN Technologies (Switch Port Analyzer) 2. Implement SNMP and Syslog 3. Implement Flexible NetFlow
2	1. Implement a GRE Tunnel 2. Implement VTP 3. Implement NAT
3	Implement Inter-VLAN Routing
4	Observe STP Topology Changes and Implement RSTP 1. Implement Advanced STP Modifications and Mechanisms 2. Implement MST
5	1. Implement EtherChannel 2. Tune and Optimize EtherChannel Operations
6	OSPF Implementation 1. Implement Single-Area OSPFv2 2. Implement Multi-Area OSPFv2 3. OSPFv2 Route Summarization and Filtering 4. Implement Multiarea OSPFv3
7	Implement BGP Communities 1. Implement MP-BGP 2. Implement eBGP for IPv4
8	Implement IPsec Site-to-Site VPNs 1. Implement GRE over IPsec Site-to-Site VPNs 2. Implement VRF Lite
9	Simulating SDN with 1. OpenDaylight SDN Controller with the Mininet Network Emulator 2. OFNet SDN network emulator
10	Simulating OpenFlow Using MININET

Wireless Networking

COURSE CODE : M23CS1E02 **COURSE CREDIT: 03**

1 credit - 15 lectures

1 lecture is 60 minutes

Course Objectives:

- To understand the basic concepts of Wireless Networking.
- To understand the various trends in Wireless Technology.
- To understand 5G technologies.

Course Objectives:

- To provide an insight on the advanced concepts of wireless technologies and Wireless Optical Communication.
- To implement the working of 4G Technologies.
- To understand applications of 5G technologies and its implementation.

Unit	Syllabus	No. of lectures
01	Introduction to Wireless Sensor Networks, Types, Advantages, Challenges and Applications, Mobile Ad-hoc Networks (MANETs), Enabling technologies for Wireless Sensor Networks. Introduction to wireless optical communication (WOC), wireless optical channels, atmospheric channel, underwater optical channel, atmospheric losses, WOC and Applications: Weather condition influence, atmospheric turbulence effects, wireless optical communication application areas, WOC challenges and applications. **Case Study**	**15**
02	4G Vision: 4G Features and Challenges, Applications of 4G; 4G Technologies - LTE FDD vs TDD comparison; frame structure and its characteristics; Smart Antenna Techniques, OFDM Trends in Wireless Technology: MIMO Systems, Adaptive Modulation and Coding with Time-Slot Scheduler - Bell Labs Layered Space Time (BLAST) System , Software- Defined Radio, Cognitive Radio **Case Study**	**15**
03	5G Technology: Understand 5GPP & NGMN, 5G architecture and design objective, 5G spectrum requirements, ITU-R IMT-2020 vision for 5G, 5G RAN & Dynamic CRAN Architecture and applications: 5G Mobile Edge Computing & Fog computing, 5G Protocol Stack, 5G Ultra-dense networks, 5G Air interface, Applications **Case Study**	**15**

References:

Wireless Networking – Practical

COURSE CODE : M23CS1EP02 COURSE CREDIT: 01

1 credit - 30 lectures

1 lecture is 60 minutes

Note:

- **Practical can be implemented using GNS3, CISCO packet tracer 7.0 and above**

Sr. No	Practical
1	Configuring WEP on a Wireless Router
2	Demonstrating Distribution Layer Functions
3	Placing ACLs
4	Planning Network-based Firewalls
5	Configure Auto Profiles ACU Utilities
6	Creating an Adhoc Network
7	Configuring Basic AP Settings
8	Configure Ethernet/Fast Ethernet Interface
9	Configure Radio Interfaces through the GUI
10	Configure Site-to-Site Wireless Link

Research Information Systems and Computing

COURSE CODE : M23CS1RM01 COURSE CREDIT: 04

1 credit - 15 lectures

1 lecture is 60 minutes

Course Objectives:

- The research methodology course is proposed to assist students in planning and carrying out research projects.
- The course starts with an introduction to research and carries on the various methodologies involved.
- Able to understand and define research, formulate problems.
- Understand and apply basic research methods including research design, data analysis and interpretation.

Course Outcomes:

- The students are exposed to the principles, procedures, and techniques of implementing research project.
- It continues with finding out the literature using technology, basic statistics required for research and finally report writing.
- Understand ethical issues in research, write research reports, research paper and publish the paper.
- Describe the research process and research methods.

Unit	Syllabus	No. of lectures
01	**Introduction:** Role of Business Research, Information Systems and Knowledge Management, Theory Building, Organization ethics and Issues. **Beginning Stages of Research Process**: Scientific Research: Definition, Characteristics, types, need of research. Identification of the problem, assessing the status of the problem, formulating the objectives, preparing design (experimental or otherwise), Actual investigation, Determining the mode of attack. Problem definition, Qualitative research tools, Secondary data research. **Literature survey:** References, Abstraction of a research paper, Possible ways of getting oneself abreast of current literature. **Case Study**	**15**
02	**Research Methods and Data Collection:** Survey research, communicating with respondents, Observation methods, Experimental research. **Measurement Concepts, Sampling and Field work:** Levels of Scale measurement, attitude measurement, questionnaire design, sampling designs and procedures, determination of sample size. **Data Analysis and Presentation:** Editing and Coding, Basic Data Analysis, Univariate Statistical Analysis and Bivariate Statistical analysis and differences between two variables. Multivariate Statistical Analysis. **Case Study**	**15**

03	**Documentation and scientific writing:** Results and Conclusions, Preparation of manuscript for Publication of Research paper, Presenting a paper in scientific seminar, Thesis writing. Structure and Components of Research Report, Types of Report: research papers, thesis, Research Project Reports, Pictures and Graphs, citation styles, writing a review of paper, Bibliography. **Publishing the Paper**: Rights and Permissions, How to Submit the Manuscript, How and When to Use Abbreviations, How to Write a thesis, Outcome of Research, Ethical issues in research **Case Study**	**15**
04	**Statistical analysis and fitting of data :** Introduction to Statistics – Probability Theories - Conditional Probability, Poisson Distribution, Binomial Distribution and Properties of Normal Distributions, Estimates of Means and Proportions; Chi-Square Test, Association of Attributes - t-Test –Anova- Standard deviation - Co-efficient of variations. Co-relation and Regression Analysis. **Case Study**	15

9. Research Methodology- A step by step Guide for Beginners, (2nd ed.) Kumar Ranjit, 2005, Pearson Education.

SCHEME OF EXAMINATION

I. FOR MAJOR PAPERS WITH 6 CREDITS

The scheme of examination shall be divided into two parts:

- **Internal assessment 40% i.e. 40 marks**
- **Semester end examination 60% i.e. 60 marks**

(A) Internal Assessment 40 marks

	Description	**Marks**
Internal Test	Two Internal tests of 20 marks each Q.1 Multiple choice Questions/True or False - 10 Marks Q.2. Attempt 2 questions out of 3 questions (5 marks each)- 10 Marks	20
Project	One Mini-Project with presentation	20
	Total	40

Note : Average of Two internal tests will be considered for 20 Marks

(B) Semester end examination 60 marks

PAPER PATTERN

Duration : 2 hours	
Total Marks: 60	
Q.1 15 marks OR 15 marks	15
Q.2 15 marks OR 15 marks	15
Q.3 15 marks OR 15 marks	15
Q.4 15 marks OR 15 marks	15
Total	60
Note: 1. Q.1, 2, 3 and 4 - 15 marks questions may be divided into sub questions if required.	

Passing criteria: Minimum 40% in Internal (16 out of 40) and 40% (24 out of 60) in semester end examination.

II. . FOR MAJOR PAPERS WITH 2 CREDITS

The scheme of examination shall be divided into two parts:

- **Internal assessment 40% i.e. 20 marks**
- **Semester end examination 60% i.e. 30 marks**

(A) Internal Assessment 20 marks

	Description	**Marks**
Internal Test	Two Internal tests of 10 marks each Q.1 Multiple choice Questions/True or False - 05 Marks Q.2. Attempt 1 question out of 3 questions - 05 Marks	10
Project	One Mini-Project with presentation	10
	Total	20

Note : Average of Two internal tests will be considered for 20 Marks

(B) Semester end examination 30 marks

PAPER PATTERN

Duration : 1 hours	
Total Marks: 30	
Q.1 10 marks OR 10 marks	10
Q.2 10 marks OR 10 marks	10
Q.3 10 marks OR 10 marks	10
Total	30
Note: 1. Q.1, 2, 3 - 10 marks questions may be divided into sub questions if required.	

Passing criteria: Minimum 40% in Internal (8 out of 20) and 40% (12 out of 30) in semester end examination.

III. FOR MAJOR PAPER WITH 4 CREDITS

The scheme of examination shall be divided into two parts:

- **Internal assessment 40% i.e. 40 marks**
- **Semester end examination 60% i.e. 60 marks**

(A) Internal Assessment 40 marks

	Description	**Marks**
Internal Test	Two Internal tests of 20 marks each Q.1 Multiple choice Questions/True or False - 10 Marks Q.2. Attempt 2 questions out of 3 questions (5 marks each)- 10 Marks	20
Project	One Mini-Project with presentation	15
Attendance	Attendance and Class behavior	5
	Total	40

Note : Average of Two internal tests will be considered for 20 Marks

(B) Semester end examination 60 marks

PAPER PATTERN

Duration : 2 hours	
Total Marks: 60	
Q.1 15 marks OR 15 marks	15
Q.2 15 marks OR 15 marks	15
Q.3 15 marks OR 15 marks	15
Q.4 15 marks OR 15 marks	15
Total	60
Note: 1. Q.1, 2, 3 and 4 - 15 marks question may be divided into sub questions if required.	

Passing criteria: Minimum 40% in Internal (16 out of 40) and 40% (24 out of 60) in semester end examination.

IV. For RM Paper

The scheme of examination shall be divided into two parts:

- **Internal assessment 40% i.e. 40 marks**
- **Semester end examination 60% i.e. 60 marks**

(A) Internal Assessment 40 marks

	Description	**Marks**
Internal Test	Two Internal tests of 20 marks each Q.1 Multiple choice Questions/True or False - 10 Marks Q.2. Attempt 2 questions out of 3 questions (5 marks each)- 10 Marks	20
Project	One Mini-Project with presentation	15
Attendance	Attendance and Class behavior	5
	Total	40

Note : Average of Two internal tests will be considered for 20 Marks

(B) Semester end examination 60 marks

PAPER PATTERN

Duration : 2 hours	
Total Marks: 60	
Q.1 15 marks OR 15 marks	15
Q.2 15 marks OR 15 marks	15
Q.3 15 marks OR 15 marks	15
Q.4 15 marks OR 15 marks	15
Total	60
Note: 1. Q.1, 2, 3 and 4 - 15 marks question may be divided into sub questions if required.	

Passing criteria: Minimum 40% in Internal (16 out of 40) and 40% (24 out of 60) in semester end examination.

SCHEME OF PRACTICAL EXAMINATION

I. FOR MAJOR PAPERS WITH 6 CREDITS

The scheme of examination shall be

- **Practical assessment carries 50 Marks : 40 marks + 05 marks (journal)+ 05 marks(viva)**
- **Minimum 75 % practical are required to be completed and written in the journal.**

(Certified Journal is compulsory for appearing at the time of Practical Exam)

(A) Practical Assessment 50 marks

Description	Marks
Q.1. Two questions of practical's (20 marks each)	40
Journal	5
Viva	5
Total	50

Passing criteria: Minimum 40% in Internal (20 out of 50)
